SUMMARY

Technical Lead with 4+ years of experience leading frontend architecture and delivery for production React/TypeScript applications, with hands-on ownership of Node.js/Express backend development since promotion. Experienced in code reviews, mentoring, requirement discussions, and production release ownership. Track record includes raising test coverage from 30% to 90% and cutting initial load time by 30%.

SKILLS

Frontend: React.js, TypeScript, JavaScript (ES6+), HTML5, CSS3, Tailwind CSS, React JSS

State Management: Redux, Zustand, Context API

Backend: Node.js, Express.js, REST APIs, Controllers/Services/Middleware, Swagger/OpenAPI

Performance & Testing: Code Splitting, Lazy Loading, Memoization, Virtualization, Jest, React Testing Library

Practices: Agile/Scrum, Code Reviews, Mentoring, Production/Release Ownership, Cross-Browser Compatibility

Tools: Git, GitHub, Vite, Postman, JIRA, Vercel

EXPERIENCE

Technical Lead | YABX

Aug 2026 – Present

- Lead technical direction across frontend and backend for 4+ production applications, with hands-on ownership of React.js/TypeScript architecture.
- Own backend development in Node.js/Express.js — building REST APIs, controllers, services, and middleware, and maintaining Swagger/OpenAPI contracts.
- Conduct code reviews and mentor 2 developers on architecture, debugging, and engineering best practices.
- Drive requirement discussions through production deployment and own release management, resolving cross-functional technical issues.
- Partner with product and design stakeholders to assess technical feasibility and scope new features before development begins.
- Troubleshoot and resolve production incidents across frontend and backend, coordinating fixes with engineering and support teams.

Senior Software Engineer | YABX

Dec 2023 – Jul 2026

- Led frontend development across 4+ production React applications, owning architecture and feature delivery.
- Reduced unnecessary re-renders by 40% and initial load time by 30% through memoization and code-splitting.
- Raised test coverage from 30% to 90% by establishing testing standards with Jest and React Testing Library.
- Introduced Zustand-based state management across applications, simplifying complex workflows and easing onboarding for new engineers.

Software Engineer | YABX

Aug 2022 – Dec 2023

- Built and shipped production React/TypeScript features for customer-facing telecom applications; developed 15+ reusable components, cutting duplicate code by 50%.
- Optimized REST API contracts, reducing payload size by 20%; implemented debounced search/filtering to cut unnecessary network requests.
- Wrote unit and integration tests while participating in Agile code reviews and feature development.

PROJECTS

Orange Retailer Portal — React, JavaScript, Context API, Mixpanel

- Owned frontend delivery for a customer-facing handset-loan platform — dynamic theming, multilingual support, and analytics integration.

KYC Builder — React, Redux, Node.js, Express.js

- Built dynamic, nested KYC form workflows with reusable components, validation, and multilingual labels to support configurable customer journeys.
- Contributed backend API and validation logic in Node.js/Express for KYC data workflows, aligning frontend and backend contracts end-to-end.

Also delivered: Collection Portal (React, TypeScript, Zustand) — client-facing collections platform with multi-step, role-based workflows.

AWARDS

- 2nd Place – Company Hackathon (Team of 5)
- Outstanding Development Recognition – YABX (Orange Portal delivery)

EDUCATION

B.Tech in Computer Science | Mody University of Science and Technology, Sikar, Rajasthan | Aug 2018 – May 2022
